No account? **Sign up**

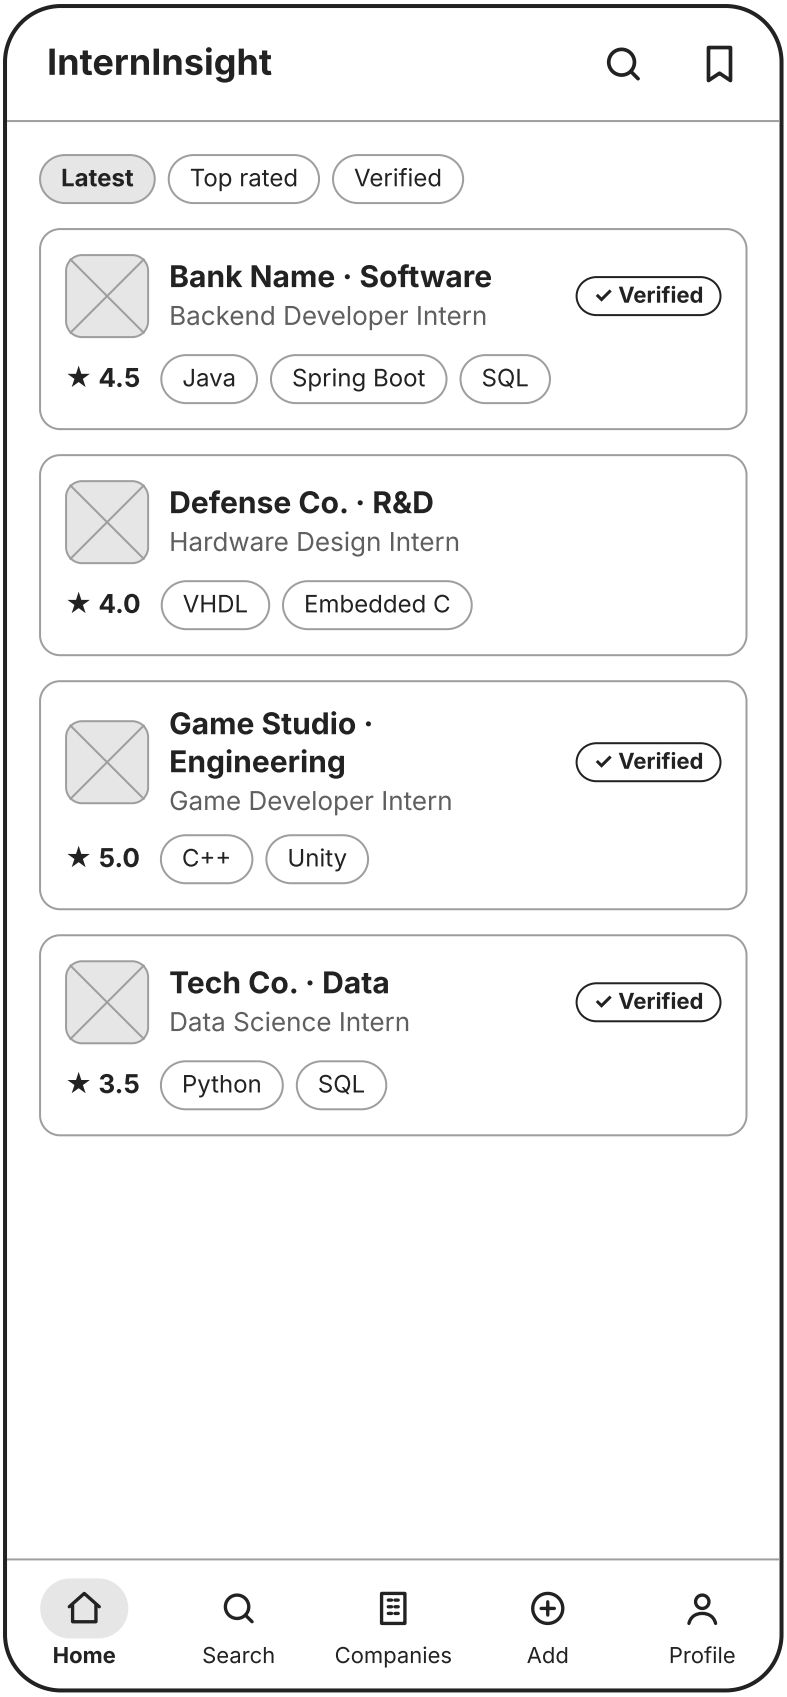

Users log in with their Sabancı email and password. New users can create an account by pressing “Sign up”.

02 Register

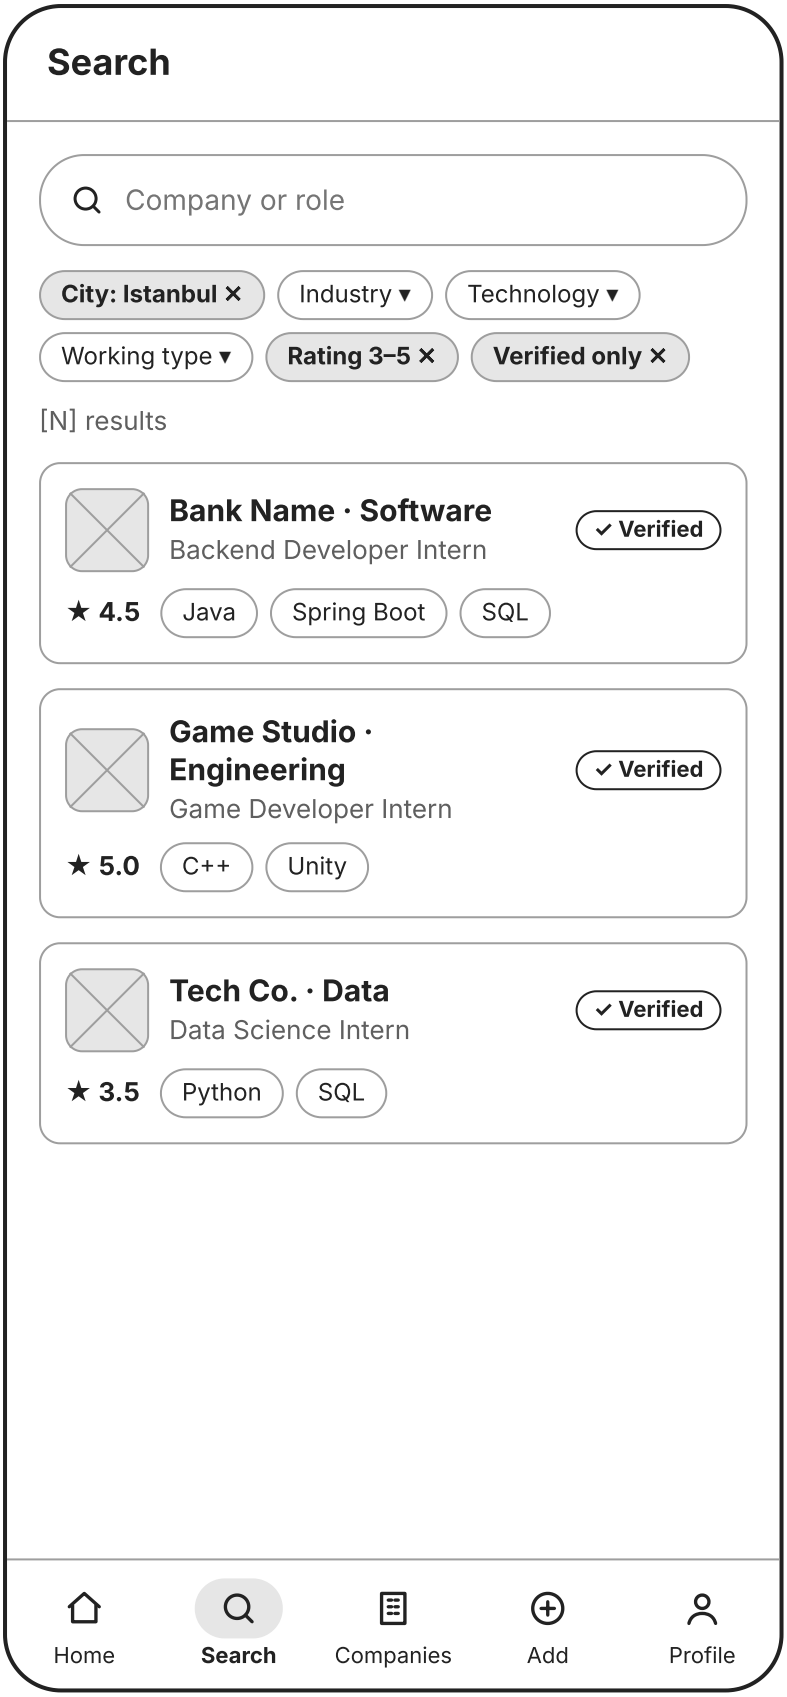

Users enter their name, Sabancı email, password, major and graduation year. Each field shows an error when invalid. “Create account” saves the new user to the database and takes them back to the Login page to sign in.

03 Home Feed

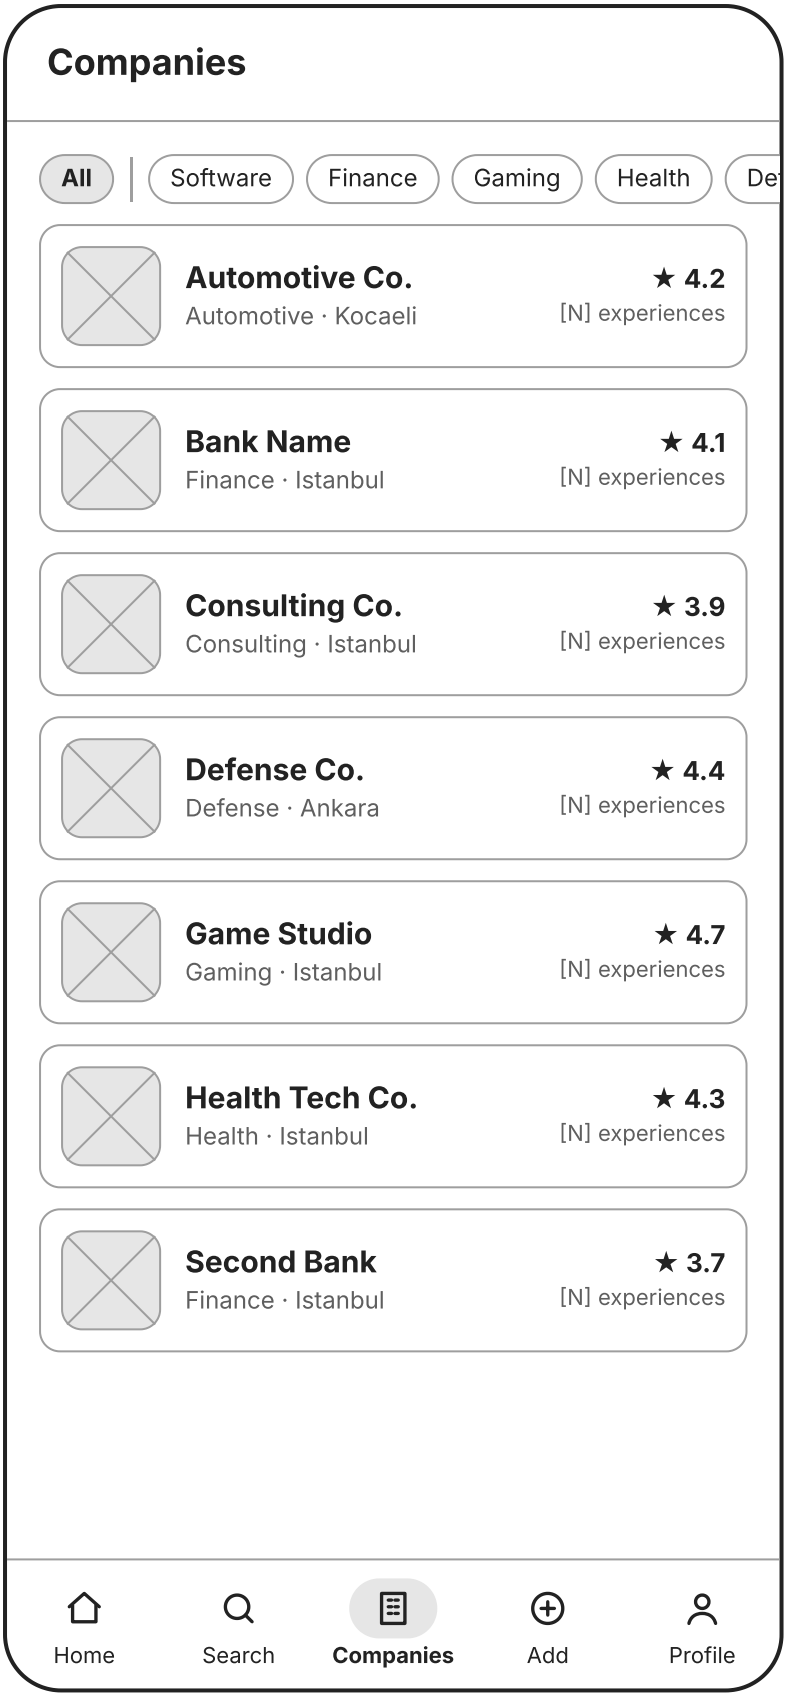

Home page shows the most recent internship experiences as cards: company logo and name, department, role, star rating, common tech stack and a verified badge. Pressing a card opens more details about that internship experience. Top bar opens Search and Saved; the bottom bar moves between the main pages.

04 Search & Filter

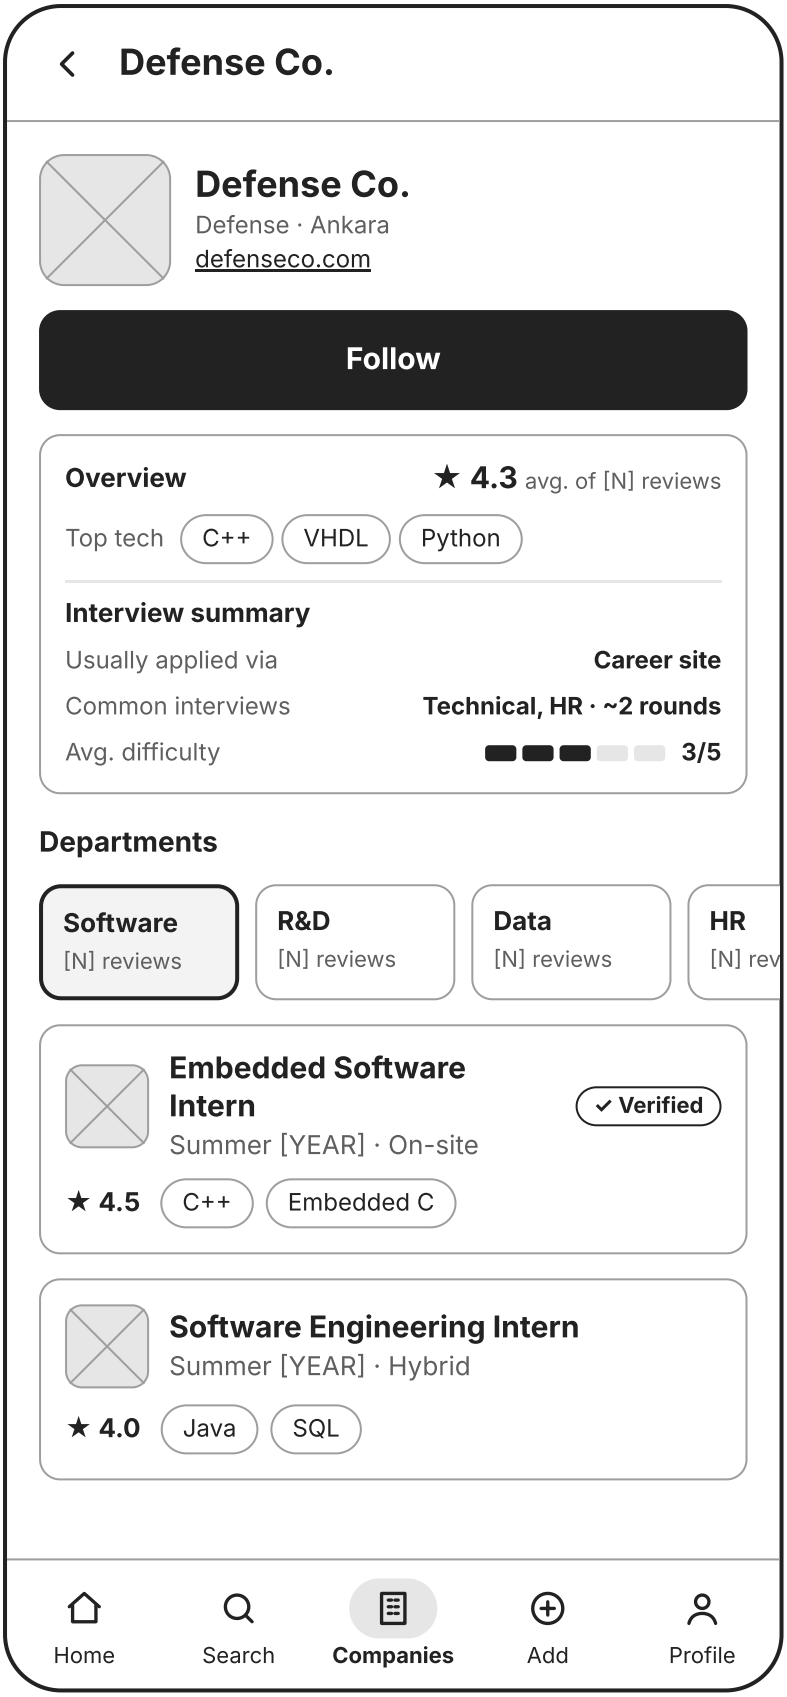

The search bar finds matching company names or roles. Filters narrow the results by city, industry, technology, working type, rating range or verified only, and the search bar also works on the filtered list. Results appear as the same cards as the Home page.

05 Company List

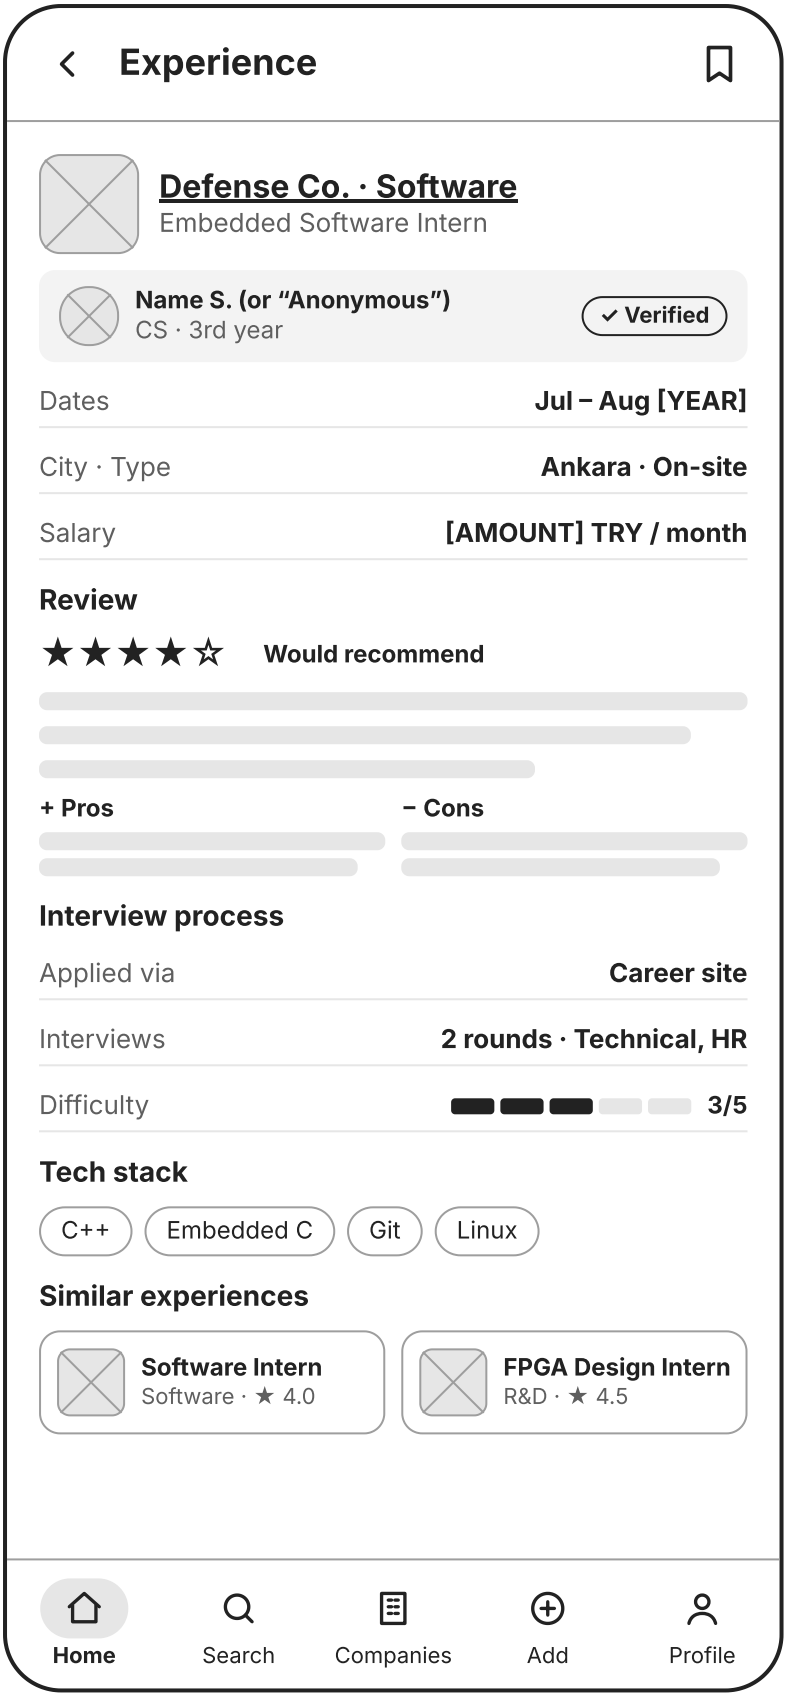

All companies on the app, with their industry, city, average rating and number of shared experiences. “All” stays fixed while the industry chips scroll sideways and filter the list; pressing a company opens its page.

06 **Company Detail**

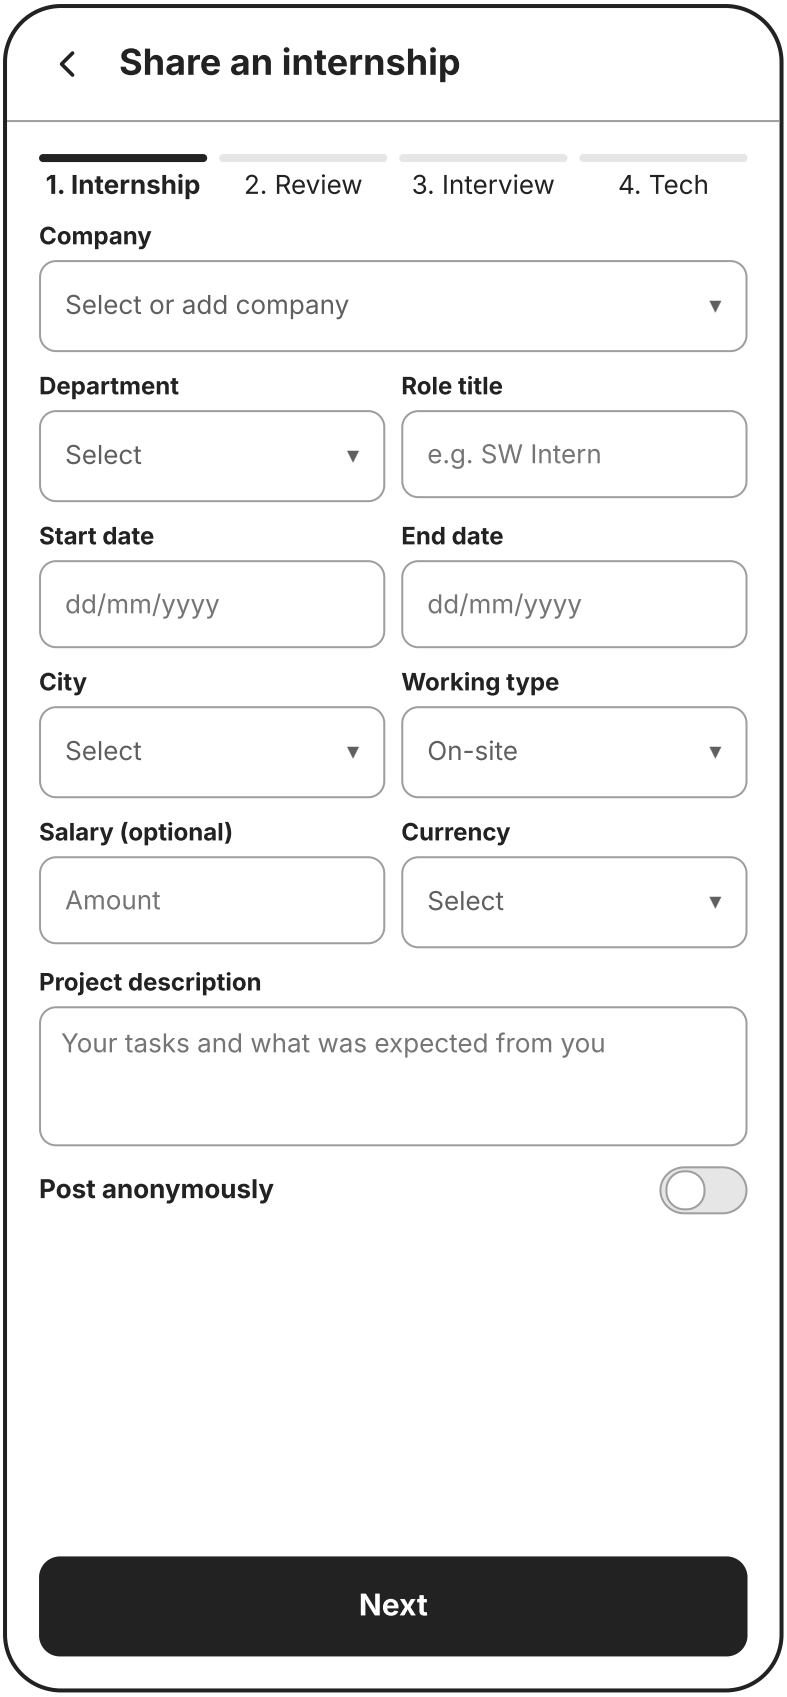

The company page shows the logo, industry and city with a Follow button. Below it there is an overview with the average rating, the most used technologies and a short interview summary. Departments can be scrolled sideways, and pressing one lists its internships.

07 Experience Detail

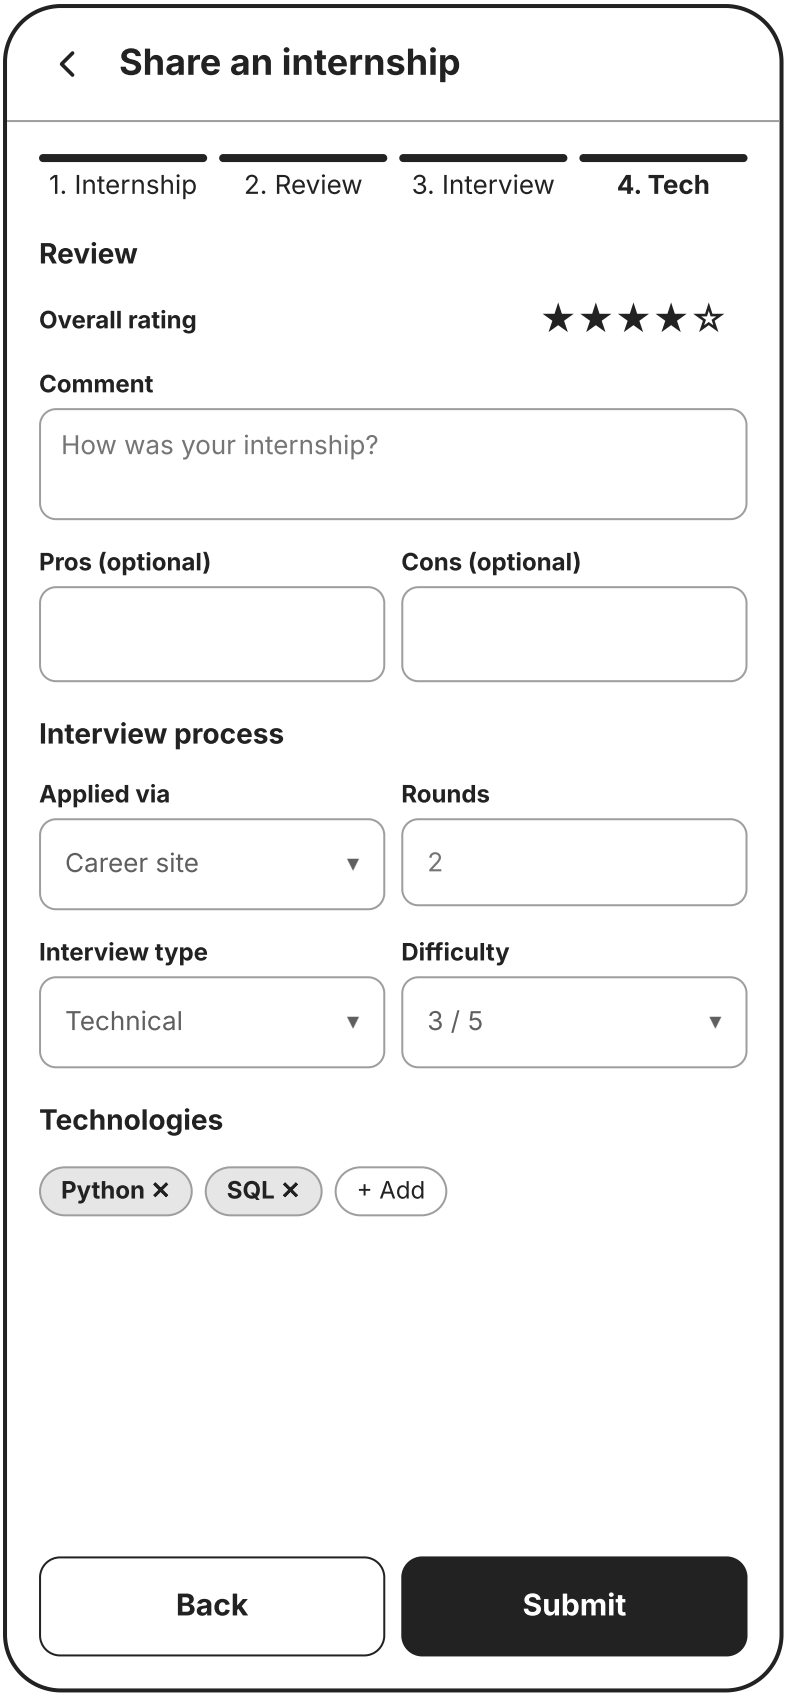

This page shows one internship in full. At the top there are the internship details and who shared it, with a verified badge if their document was approved. Below there are the review, the interview process and the tech stack. The bookmark icon saves the post, and similar internships are listed at the bottom.

08 Add Experience — Step 1

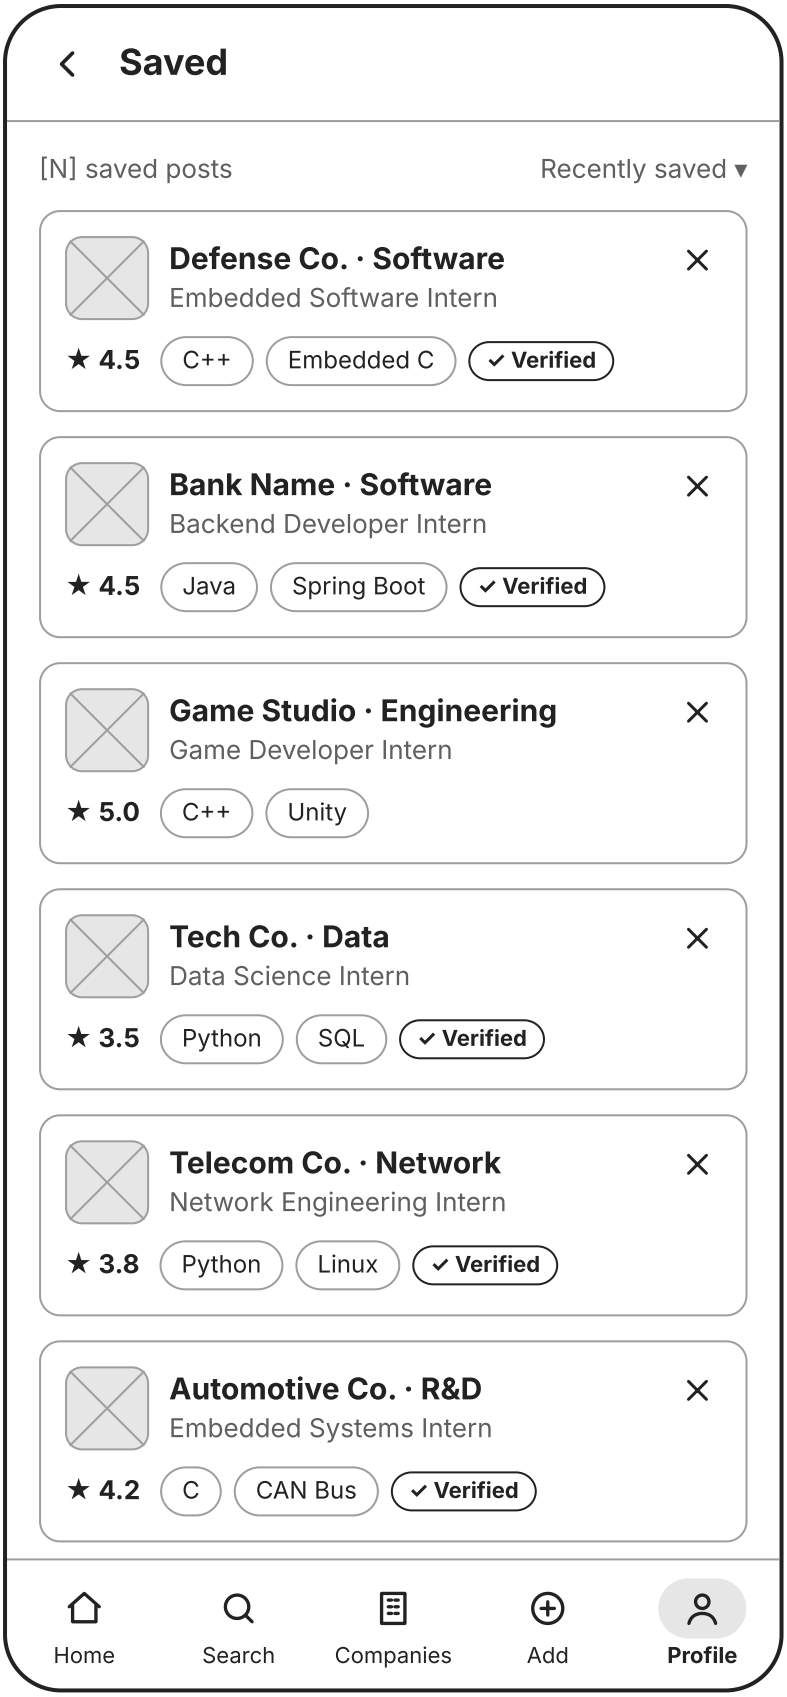

The first step of sharing an internship. The company, department, role, dates, city, working type, salary and a short project description are filled in here, and the post can be shared anonymously. If a required field is empty or invalid, an error shows under it. Next moves on to the review.

09 Add Experience — Steps 2–4

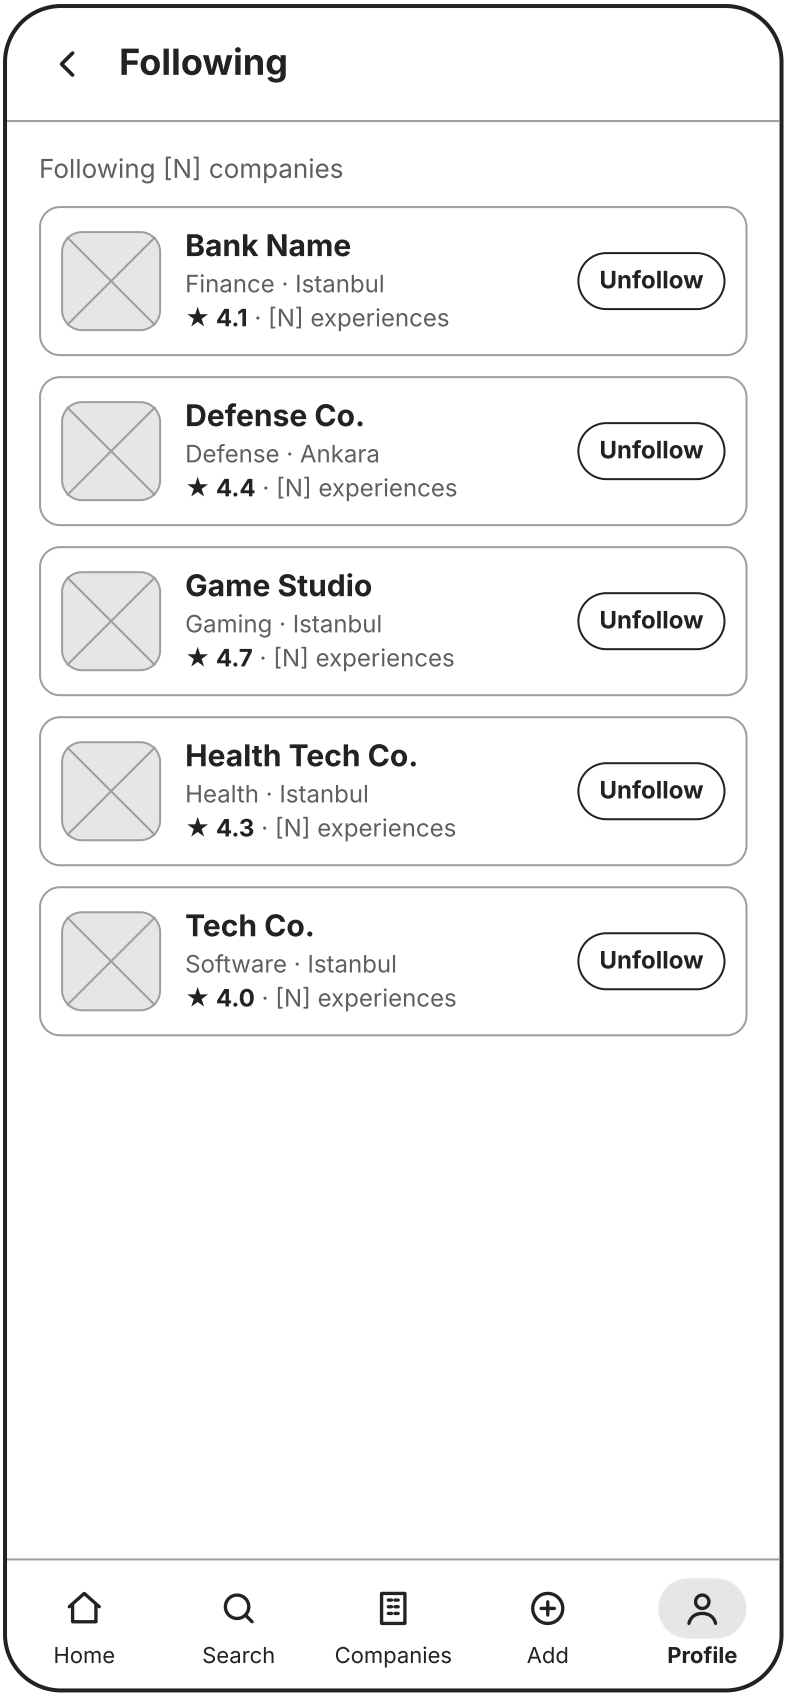

The rest of the form. Here the internship gets a star rating, a comment and optional pros and cons, then the interview process and the technologies used. Submit shows a confirmation dialog and publishes the post as unverified. Verification can be requested later from the Profile page.

Saved

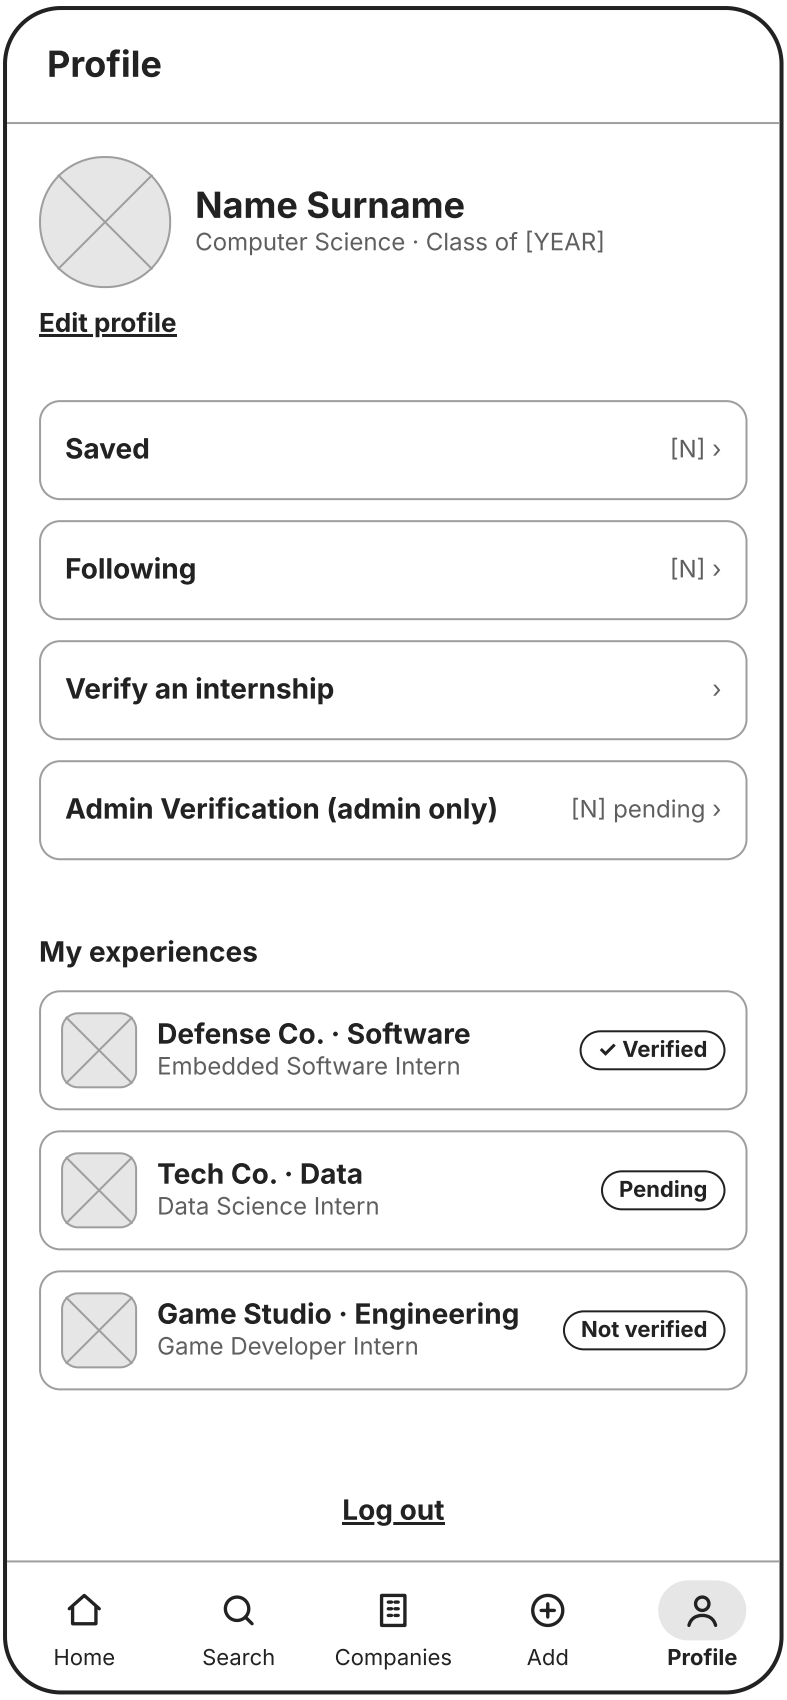

Saved posts are listed from the most recently saved to the oldest, and the list scrolls when it gets long. Each card works like on the Home page, and the X button removes it from the list. The page opens from the bookmark icon on the Home page or from Profile.

11 Following

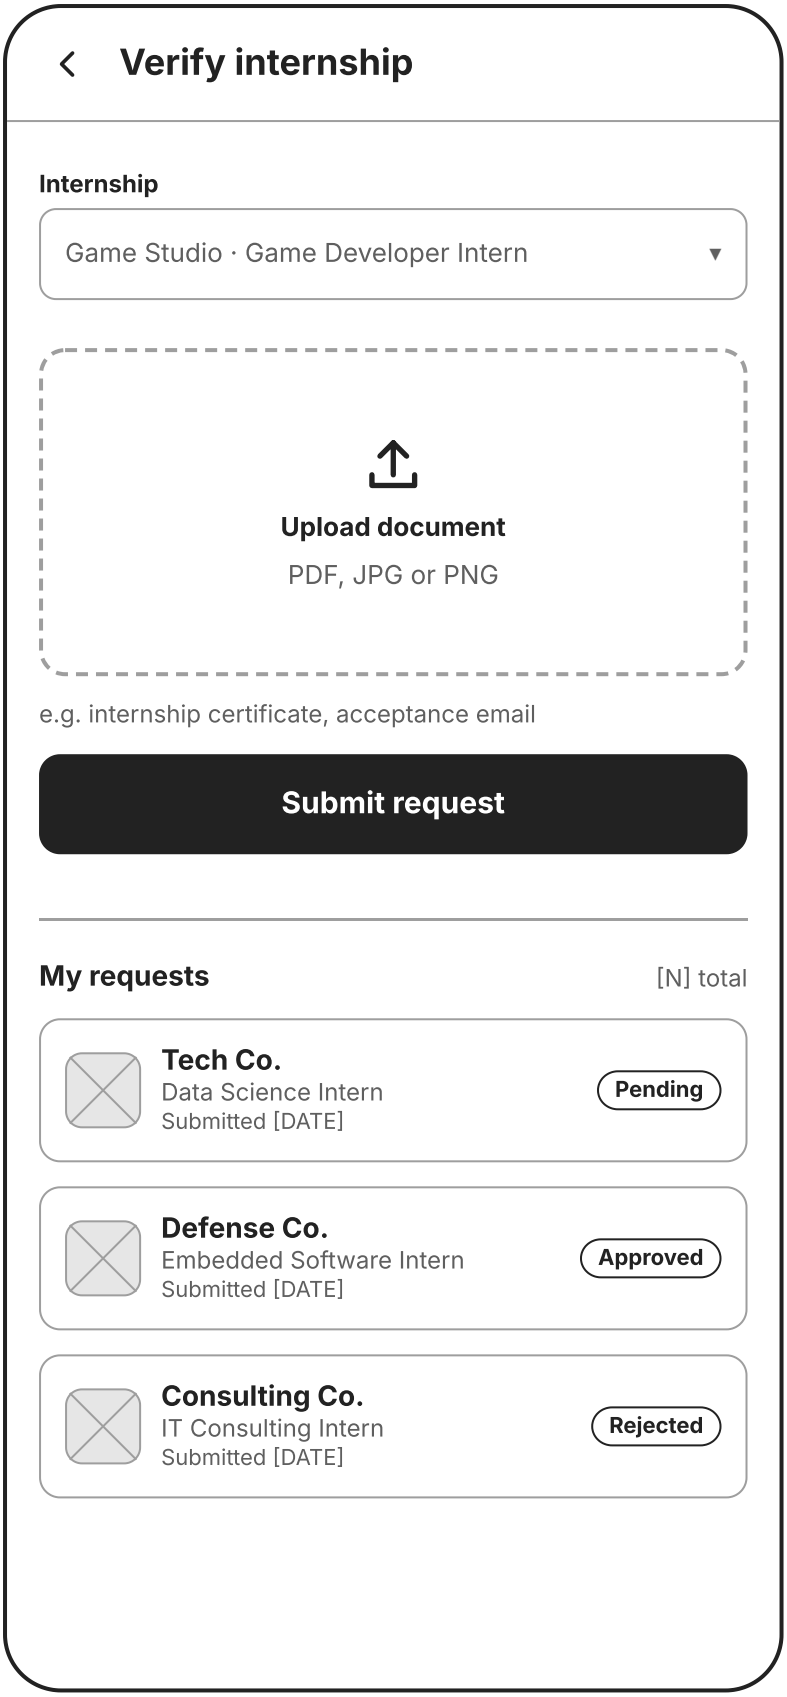

The same list as the Companies page, but only with the companies the user follows. Pressing a company opens its page, and Unfollow removes it from this list.

Profile

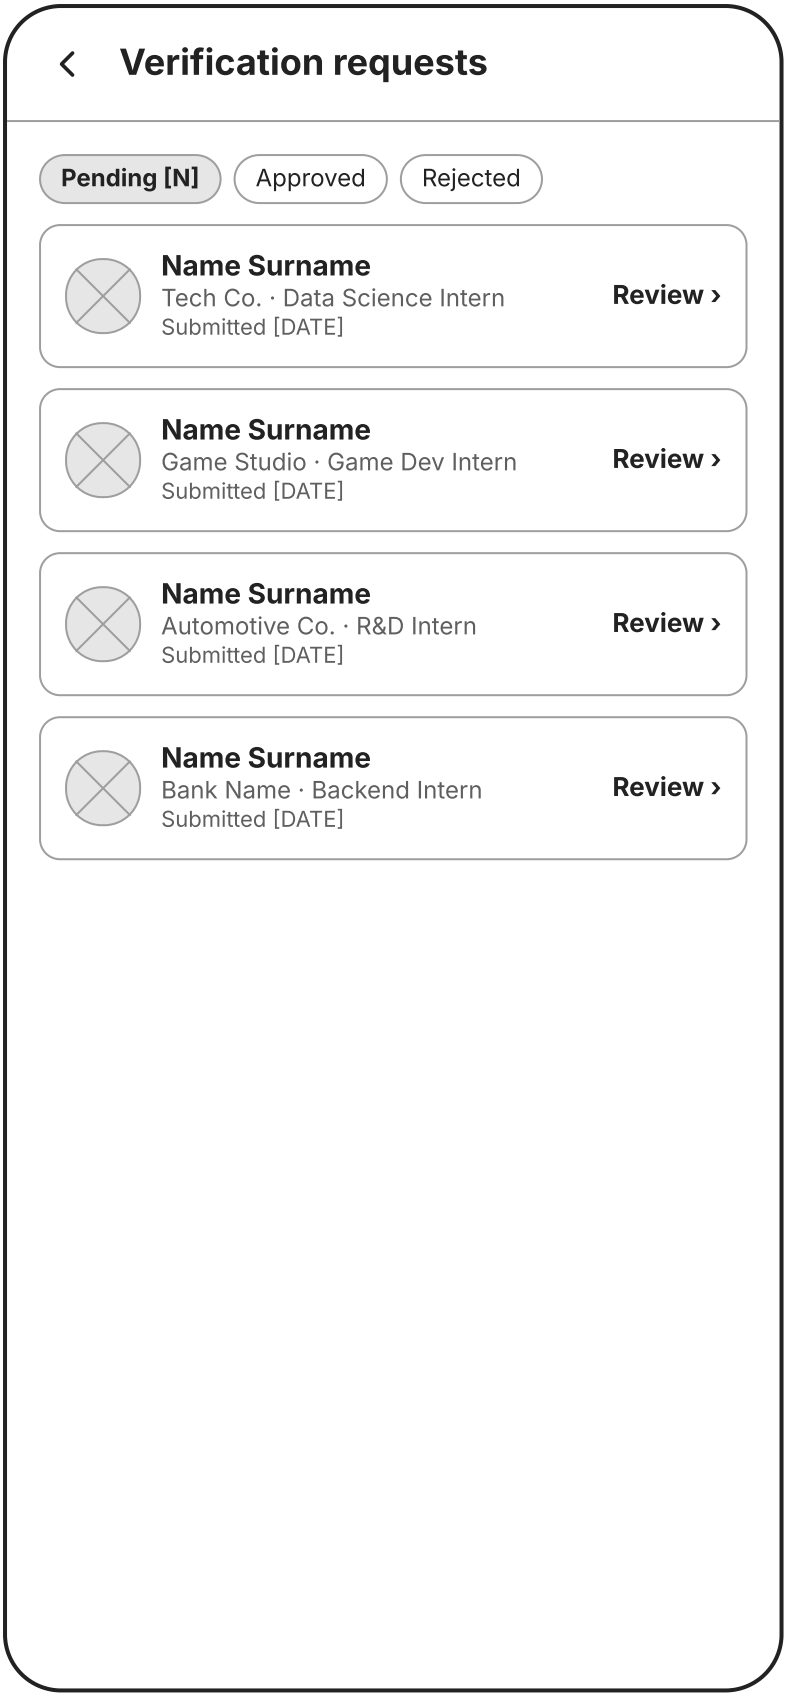

The profile page shows the student's editable name, major and graduation year. Saved, Following and internship verification can be reached from the profile page. The student's own experiences are listed with their verification status and open for editing when pressed. Admin Verification shows only for admins, and Log out signs the user out.

13 Verification Upload

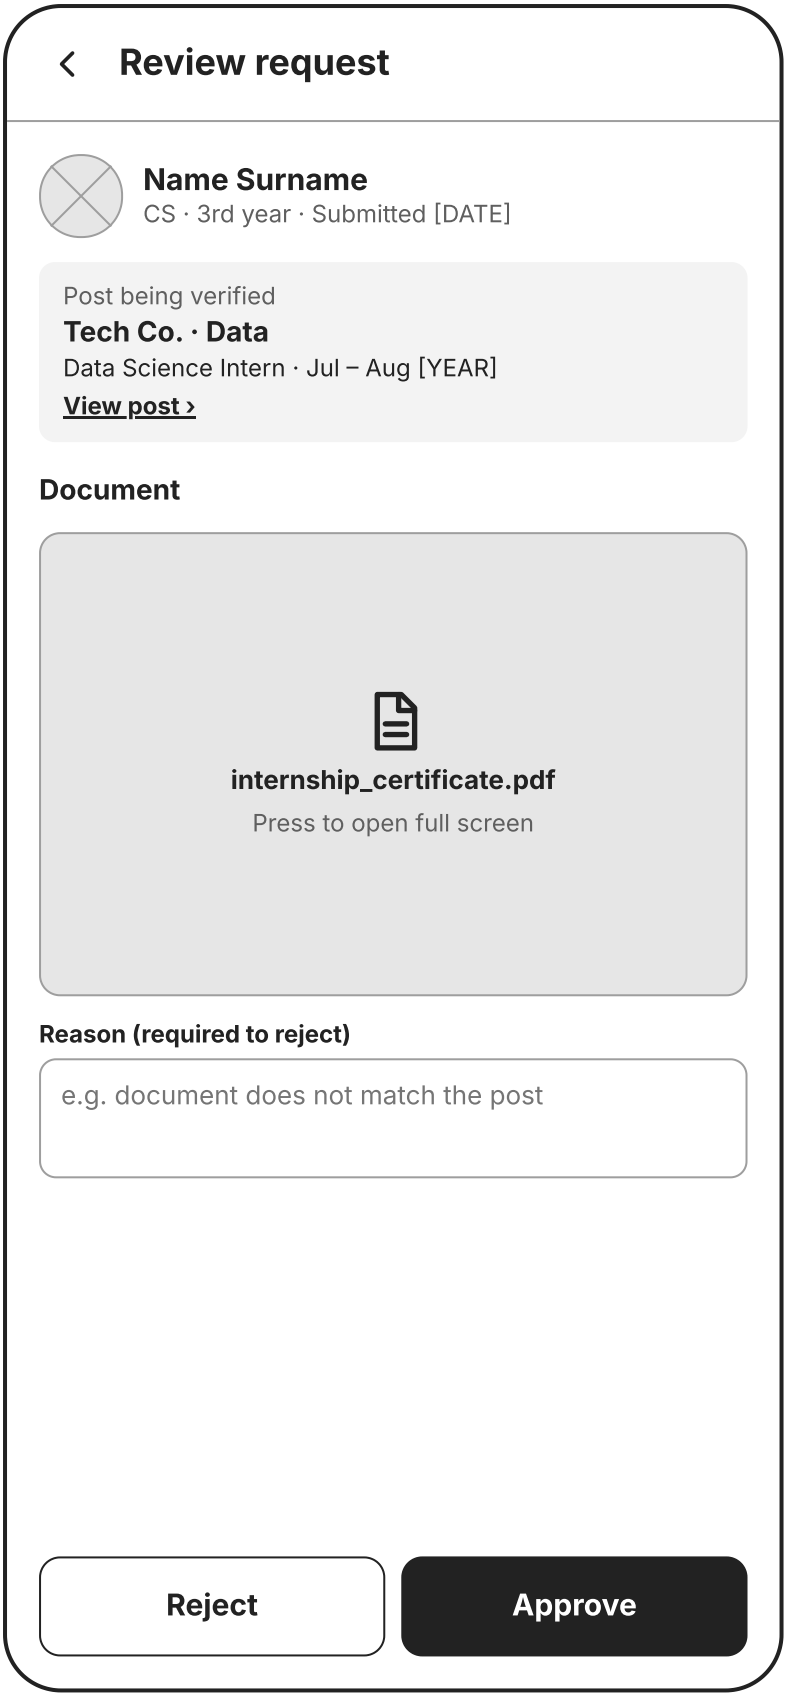

Students can pick one of their internships from the dropdown menu and upload a document that proves they completed it, like an internship certificate or an acceptance email. Each request shows up below as Pending, Approved or Rejected.

14 Admin Verification

Only admin accounts can open this page. Pending requests are listed first, oldest at the top, and pressing one opens it for review. The Approved and Rejected tabs keep the history.

15 Review Request

Admins open the uploaded document and compare it with the post before deciding. Rejecting needs a short reason, which the student sees in My requests. Both buttons ask “Are you sure?” first, and approved posts get the verified badge.
